

# PASERIE (V1R1M1)

## Utility for Source-Level Distribution in IBM i

This utility helps you maintain your IBM i source code on GitHub. Once available on a target system, the utility allows you to install your packages in a very simple way, directly accessing your repositories on GitHub or the repositories of other developers that authorized you.

The suite provides a total of three commands:

- For end users of a package:
  - **PASERIE/INSTALL** the main command focusing on the installation phase of an already developed and GitHub-released package.
- For developers:
  - **PASERIE/INSTALLOC** the command used in the development phase to test the installation of a package (planned to be released on GitHub or not) directly from a directory in the IFS.
  - **PASERIE/LIBCLONE** the command used to jump-start the packaging (consistently with PASERIE tools' conventions) from an existing native library.

## INSTALLATION

I assume you have **bash**, **git** and **curl** installed in your *PASE* environment.

From **CALL QP2TERM**, you can verify that **git** and **curl** are installed:

```
$
> PATH=/Q0penSys/pkgs/bin:$PATH
$
> export PATH
$
> which bash
/Q0penSys/pkgs/bin/bash
$
> which curl
/Q0penSys/pkgs/bin/curl
$
> which git
/Q0penSys/pkgs/bin/git
```

Using curl download the following archive (supporting IBM i 7.3, 7.4 and 7.5):

```
curl -o Pase0ssFloating.tar
      https://www.andrearibuoli.it/paserie/Pase0ssFloating.tar
```

From *the home path of the user* that will be using *PASERIE/INSTALL* we install **PaseOss** folder by untarring *PaseOssFloating* tar file:

```
cd ~
tar xvf Pase0ssFloating.tar
```

Now, still from *the home path of the user* that will be using *PASERIE/INSTALL* we perform:

```
cd ~
git clone https://github.com/AndreaRibuoli/PASERIE.git
cd PASERIE
bash ./bootstrap.sh
```

after exiting from the QP2TERM session you should have **PASERIE** utilities available.

THE NAME

pastry ==> *pâ-tis-se-rie* ==> **PASERIE**

PARAMETERS FOR THE THREE COMMANDS WITH SCREEN SHOTS

KWD	INSTALL	INSTALLOC	LIBCLONE
REPO_OWNER	yes		
REPOSITORY	yes		
YOURGITPAT	yes		
SRCLIB			yes
LOCALPATH		yes	yes
TGTLIB	yes	yes	
TGTRLS	yes	yes	
DEVOPT	yes	yes	yes
LOGOUTPUT	yes	yes	yes
VERBOSE	yes	yes	yes

```

PASERIE Installer          V1R1M0 (INSTALL)

Type choices, press Enter.

GitHub repository owner . . . . REPO_OWNER
Repository . . . . . REPOSITORY
GitHub personal access token . . YOURGITPAT

Target library . . . . . TGTLIB      *REPOSITORY
Target release . . . . . TGTRLS     *CURRENT

Additional Parameters

Development option . . . . . DEVOPT   N
Job log output . . . . . LOGOUTPUT  *PND
Verbose . . . . . VERBOSE           N

```

```

PASERIE Local Installer V1R1M0 (INSTALLLOC)

Type choices, press Enter.

Project directory . . . . . LOCAL_PATH

Target library . . . . . TGTLIB      *LOCAL_PATH
Target release . . . . . TGTRLS     *CURRENT

Additional Parameters

Development option . . . . . DEVOPT   N
Job log output . . . . . LOGOUTPUT  *PND
Verbose . . . . . VERBOSE           N

```

```

PASERIE Library Clone     V1R1M0 (LIBCLONE)

Type choices, press Enter.

Source library . . . . . SRCLIB
Target project directory . . . . LOCAL_PATH *SRCLIB

Additional Parameters

Development option . . . . . DEVOPT   N
Job log output . . . . . LOGOUTPUT  *PND
Verbose . . . . . VERBOSE           N

```

On a system based in Italy the commands will be compiled from localized source files:

```

                PASERIE Installatore      V1R1M0 (INSTALL)

Immettere le scelte e premere Invio.

Proprietario repo su GitHub . . . REPO_OWNER
Repository . . . . . REPOSITORY
Token di accesso a GitHub . . . YOURGITPAT

Caricamento nella libreria . . . TGTLIB      *REPOSITORY
Rilascio di destinazione . . . TGTMLS      *CURRENT

                Parametri aggiuntivi

Opzione di sviluppo . . . . . DEVOPT        N
Emissione registrazione lavoro LOGOUTPUT    *PND
Verboso . . . . . VERBOSE      N
```

```

                PASERIE Installa locale V1R1M0 (INSTALLLOC)

Immettere le scelte e premere Invio.

Directory del progetto . . . . . LOCAL_PATH

Caricamento nella libreria . . . TGTLIB      *LOCAL_PATH
Rilascio di destinazione . . . . TGTMLS      *CURRENT

                Parametri aggiuntivi

Opzione di sviluppo . . . . . DEVOPT        N
Emissione registrazione lavoro LOGOUTPUT    *PND
Verboso . . . . . VERBOSE      N
```

```

                PASERIE Clona Libreria  V1R1M0 (LIBCLONE)

Immettere le scelte e premere Invio.

Libreria di sorgenti . . . . . SRCLIB
Directory del progetto . . . . . LOCAL_PATH  *SRCLIB

                Parametri aggiuntivi

Opzione di sviluppo . . . . . DEVOPT        N
Emissione registrazione lavoro LOGOUTPUT    *PND
Verboso . . . . . VERBOSE      N
```

On a system based in Germany the commands will be compiled from localized source files:

```
PASERIE Installateur V1R1M1 (INSTALL)

Type choices, press Enter.

GitHub Repository Besitzer . . . REPO_OWNER
Repository . . . . . REPOSITORY
GH persönlicher Zugriffstoken . YOURGITPAT

Zielbibliothek . . . . . TGTLIB      *REPOSITORY
Zielfreigabe . . . . . TGTRLS      *CURRENT

Additional Parameters

Entwicklungsoption . . . . . DEVOPT      N
Auftragsprotokoll-Ausgabe . . . LOGOUTPUT *PND
Ausführlich . . . . . VERBOSE      N
```

```
PASERIE Lokalen Installateur (INSTALLLOC)

Type choices, press Enter.

Projektverzeichnis . . . . . LOCAL_PATH

Zielbibliothek . . . . . TGTLIB      *LOCAL_PATH
Zielfreigabe . . . . . TGTRLS      *CURRENT

Additional Parameters

Entwicklungsoption . . . . . DEVOPT      N
Auftragsprotokoll-Ausgabe . . . LOGOUTPUT *PND
Ausführlich . . . . . VERBOSE      N
```

```
PASERIE Bibliothek Klonen (LIBCLONE)

Type choices, press Enter.

Quellbibliothek . . . . . SRCLIB
Zielprojektverzeichnis . . . . . LOCAL_PATH *SRCLIB

Additional Parameters

Entwicklungsoption . . . . . DEVOPT      N
Auftragsprotokoll-Ausgabe . . . LOGOUTPUT *PND
Ausführlich . . . . . VERBOSE      N
```

## HINTS FOR DEVELOPERS

The minimum provision to enable **PASERIE/INSTALL** handling your "native" IBM i GitHub repository is:

- creating a file named **GUIDANCE.TXT** in the root of the repository and
- creating a directory named **QCLSRC** and a **QCLSRC/BUILD.CLLE** ILE CL source

The installer will use the token passed with **YOURGITPDA** (*GitHub personal access token*) to access GitHub APIs and download **GUIDANCE.TXT** in memory. The content is a list of member files that will be created in the **QTEMP** of the batch job. Once all files are transferred the job will attempt the compilation of **QTEMP/QCLSRC(BUILD)** member file into **QTEMP/BUILD \*PGM**. If successful, it will pass control to your build procedure.

The expected input parameters of a well-behaving **QCLSRC/BUILD.CLLE** are the following (in this order):

```
DCL VAR(&DEVOPT) TYPE(*CHAR) LEN(1)
DCL VAR(&TGTRLS) TYPE(*CHAR) LEN(10)
DCL VAR(&TGTLIB) TYPE(*CHAR) LEN(10)
```

that default to **'N'**, **'\*CURRENT'**, and **'\*PACKAGEN'** if not set in **PASERIE/INSTALL**, or **PASERIE/INSTALLLOC**, corresponding parameters.

The **PASERIE/LIBCLONE** utility generates a directory with all the required PASERIE-related objects. It also introduces a dependency on the **TMKMAKE** utility (from **QUSRTOOL** library). I have re-packaged it for a plain installation with **PASERIE/INSTALL** (please contact me if you need help in installing it: [andrea.ribuoli@yahoo.com](mailto:andrea.ribuoli@yahoo.com))

## HANDS ON

Let us take confidence with **PASERIE/LIBCLONE**.

First we create a new native library named **SIMPLE**:

```
CRTLIB LIB(SIMPLE)
```

Now we create a source file named **QCLSRC** with a member named **GREETINGS**:

```
CRTSRCPF FILE(SIMPLE/QCLSRC)
        MBR(GREETINGS)
        TEXT('Help me understand PASERIE tools')
```

Let us assign the **CLLE** SEU-type to our member file:

```
CHGPFM FILE(SIMPLE/QCLSRC) MBR(GREETINGS) SRCTYPE(CLLE)
```

Let us edit the source file:

```
EDTF FILE(SIMPLE/QCLSRC) MBR(GREETINGS)
```

and enter a simple CL source like:

```
Edit File: SIMPLE/QCLSRC(GREETINGS)
Record :      1    of      3 by 10
Control : _____

CMD ..+....2....+....3....+....4....+....5....+....6....
*****Beginning of data*****
PGM
SNDPGMSG MSG('Your first use of PASERIE/LIBCLONE')
ENDPGM
*****End of Data*****
```

Now we issue the following command:

```
PASERIE/LIBCLONE SRCLIB(SIMPLE)
```

We should receive:

```
Selection or command
===>

F3=Exit   F4=Prompt
F23=Set initial menu
LIBCLONE_B completed.
```

Now let us run `WRKLNK OBJ(SIMPLE)` and use option 5 to enter the directory. We should find:

Opt	Object link	Type	Attribute	Text
	GUIDANCE.TXT	STMF		
	QCLSRC	DIR		
	QMAKSRC	DIR		

The content of `GUIDANCE.TXT` will be:

```
*****Beginning of data*****
QCLSRC    GREETINGS CLLE    Help me understand PASERIE tools
QCLSRC    BUILD      CLLE    BUILD CLLE auto-generated
QMAKSRC    BUILD      TXT     BUILD Makefile auto-generated
*****End of Data*****
```

Inside **QCLSRC** directory you will find two source members:

Opt	Object link	Type
	BUILD.CLE	STMF
	GREETINGS.CLE	STMF

And there is also a **QMAKSRC** with a **BUILD** member.

Assuming you have a **TMKMAKE** library with a working **TMKMAKE** command you will be able to run successfully:

**PASERIE/INSTALLOC LOCAL\_PATH(SIMPLE)**

Now issuing **CALL PGM(SIMPLE/GREETINGS)** we will get:

```
Selection or command
===>

F3=Exit   F4=Prompt   F9=Retrieve
F23=Set initial menu
Your first use of PASERIE/LIBCLONE
```

# CURRENTLY SUPPORTED VERSIONS

**PASERIE** currently supports **IBM i PASE** from 7.2 to 7.5 but I am working on extending the coverage of previous versions to facilitate reuse of code originally developed on older versions of the operating system.

IBM i PASE	AIX		INSTALL	INSTALLOC	LIBCLONE
7.5	7.2	TL5	yes	yes	yes
7.4		TL2	yes	yes	yes
7.3	7.1	TL4	yes	yes	yes
7.2		TL1	yes	yes	yes
7.1	6.1	TL2		yes	yes
6.1	5.3	TL6		yes	yes
5.4		ML3		yes	yes

- **TR** *Technology Refresh (IBM i)*
- **TL** *Technology Level (AIX)*
- **ML** *Modification Level (AIX)*

*Note:* Starting in 2006, as part of the new *AIX 5L Service Strategy*, **MLs** were replaced by **TLs**
